

New Global Power Generation Projects

Ed 1 2012

Market Intelligence

This NRG Expert product provides a continuously up-dated listing of global electric power generation projects proposed, under construction or awaiting commissioning.

- Currently there is 1.6 million MW of new generation capacity planned
- The projects in this database range from those which are mere ideas to those near completion
- Commissioning dates are given for 44% of the database, otherwise a description such as 'planned', 'tender', 'under construction' is given and 35% note specifically 'no date for commissioning'
- All projects have been identified with as much information as available and more is added on a continuous basis
- It is not always easy to ascertain the status of projects in the pipeline
- It is no by no means uncommon that a project is announced as starting or already started and for it then to be delayed for some years while unforeseen problems are resolved, usually involving financial, official approval or environmental obstacles
- Large projects are also frequently commissioned in stages, with separate units coming on-line over years, sometimes many years

How can NRG Expert Help?

The NRG Expert New Global Power Generation Projects Ed 1 2012 – contains the following:

- A listing of global electric power generation projects proposed, under construction or awaiting commissioning
- This listing is not a census of projects but a prospect list built up from many sources and the information about each project varies, from comprehensive data to only a notification that a project is in the pipeline
- This listing is complementary to the Global Database of Operational Power Generation Plants, a larger database of existing generation projects which are currently operational throughout the world
- The NRG Expert trio of Power Generation products provide a listing of new, commissioned and existing plants and also provides generation capacity by fuel from 1990 to 2020. Please contact info@nrgexpert.com for further information
